

The Barton Center for Diabetes Education, Inc.

Dear Parents and Guardians,

The Barton Center is committed to maintaining the health and well-being of your child while he or she is in our care. In order to accomplish that goal, we must have a strong and open two-way communication regarding your child. We know that you want only what is best for your child, and we share that expectation.

MEDICAL:

Campers' diabetes management and incidental health care needs are directly supervised or attended to by Barton Center Health Care Team members according to Barton Center written protocols. A designated licensed medical care provider experienced in diabetes management is available on-site for consultation at all times.

DIABETES MANAGEMENT: Children's activity, diet, sleep patterns, and stress levels are different at camp than at home. The primary diabetes management goal at camp is to avoid extremes in blood glucose levels. It has been our experience that, for most children, the basal rate or long-acting insulin dose, needs to be reduced by 20% on opening day. Each child's blood glucose levels are reviewed daily, and insulin plans will be adjusted as needed to maintain safe and therapeutic glycemic control.

CONTINUOUS GLUCOSE MONITORING: Campers and under-18 staff members using continuous glucose monitors are required to perform capillary blood glucose checks according to The Barton Center's protocols. While alarms and trending information from the CGM will be taken into account, no insulin administration or other treatment decision will take place without a confirmatory blood glucose reading. At this time, we are not prepared to utilize cloud-based or other technologies to continuously monitor campers' glucose levels. Campers will not be allowed to have cell phones in their possession for this purpose. We encourage families to take a break from these technologies during camp sessions.

DIABETES SUPPLIES: We provide blood glucose meters, strips, insulin, and treatment for low blood glucose. Please provide any pump and/or CGM supplies your child will need, including extra infusion sets to account for increased activity leading to more frequent site changes. Campers using ½-unit insulin pens should bring these as well. We do supply the insulin cartridges for the ½-unit pens.

EDUCATION: Campers are taught to identify the impacts of nutrition, activity, stress, sleep and medication on their diabetes management. Younger campers collaborate with camp staff as they learn to play a greater role in balancing their lives with diabetes; older campers are encouraged to explore how diabetes affects them as members of the community. Our education strategy blends teachable moments and group sessions with camp counselors, health care team members, and nutritionists.

BEHAVIOR: We expect that your child will have a wonderful experience at camp. However, behaviors that endanger self or others will not be accepted, and we may be forced to send your child home if such behavior cannot be controlled. Behaviors that may lead to dismissal from camp include actions dangerous to self or others, unsupervised insulin delivery, and uncontrolled disordered eating. Campers who give bolus insulin by means of an insulin pump without staff supervision may be taken off the pump and placed on injections. You will be notified if this occurs.

PARENTAL NOTIFICATION: It is the policy of The Barton Center to notify parents of the following:

- Behavioral problem
- Illness or injury requiring extended observation in the Health Care area
- Injury requiring more than simple first aid
- Hypoglycemia resulting in unconscious state or seizure
- Referral to an outside health care facility
- Medication error
- New prescription
- Changes in diabetes management other than titration of insulin dose
- Pump malfunction
- Other situations as deemed necessary by the Camp Director or Medical Providers

If you have any questions or concerns, please contact us at 508-987-2056, Ext. 2000.
